SUMMARY

Software Engineer with 3+ years of experience in system architecture, enterprise middleware integration, and AI-enabled tooling. Proficient in .NET Core, Azure (Functions, API Management, Logic Apps), RabbitMQ, React, and cloud-native distributed systems. Seeking software engineering roles building scalable, high-availability production services.

EDUCATION

Indian Institute of Technology, Kharagpur

Graduated May 2023

Bachelor of Technology, Biotechnology and Biochemical Engineering

SKILLS

Languages: JavaScript, TypeScript, C#, Python, SQL, PostgreSQL, Solidity

Frameworks / Libraries: .NET Core, ASP.NET, React, Next.js, Flutter, Express, Fluent UI, MSAL, LangChain, Streamlit, Tailwind CSS, Wagmi

Cloud & Middleware: Azure Functions, Azure API Management, Azure Logic Apps, Azure DevOps, GitHub Actions, RabbitMQ, Docker, AWS (S3, Bedrock, Transcribe, Polly)

Tools & Platforms: Prometheus, Grafana, Microsoft Graph API, SharePoint, SQL Server, Git, Hardhat, Prisma, Pinata (IPFS), Vitest

EXPERIENCE

Research and Innovation Engineer

Jul 2023 – Present

Adrosonic, Mumbai

- Currently leading a **team of 4 engineers** as **Technical Lead**; driving **solution architecture** for enterprise clients, delivering **Azure cloud-native** scalable solutions spanning serverless compute, API management, messaging infrastructure, and CI/CD automation.
- Architected a **middleware integration layer** for a Policy Administration System; built a **JSON transformation engine via Azure Functions**, configured **Azure API Management** with OAuth 2.0 (external) and Managed Identity (internal) gateways with custom policies; instrumented telemetry via **Azure Application Analytics** — reduced integration development time from **~6 weeks to ~2 weeks** and achieved **99.9% successful payload delivery rate**.
- Re-engineered an **email filing agent and DMS pipeline** (SharePoint) to **.NET Core + RabbitMQ** pub/sub; implemented **message deduplication**, dead-letter queuing, and **queue mirroring across RabbitMQ cluster nodes** containerised with **Docker**; built **Prometheus**-instrumented observability dashboards — achieving **~40% reduction in average message latency** and improved throughput under peak load.
- Migrated a legacy COM-based Outlook add-in to a modern **React + Fluent UI Outlook Web Add-in** with **SSO via MSAL (Microsoft Authentication Library)**, Microsoft Graph API integration, and offline attachment caching via IndexedDB; deployed to **10,000+ users** with measurably reduced UX friction.

PROJECTS

RageQuit Escrow 🐙 ragequit-escrow

2025 – 2026

On-chain escrow with AI risk gating, Uniswap V3 funding, and a Telegram veto bot.

- Engineered **RageQuitEscrow.sol** (Solidity 0.8.24, Hardhat) featuring ETH/ERC-20 dual-path settlement, locked-balance accounting to prevent race conditions, and structured **PaymentDecisionLogged** audit events; executed end-to-end integration testing using mock routers.
- Developed a two-layer off-chain risk gate utilizing Venice AI private inference, integrated Uniswap V3 swap funding with Quoter V2 slippage checks, and built a Next.js 15/Wagmi dashboard alongside a real-time Telegram veto bot.

City Vault 🐙 city-vault

2025 – 2026

Multi-tenant records governance with 6-role RBAC, full document lifecycle, and IPFS audit trail.

- Architected a multi-tenant records governance platform (Next.js 15, Prisma, Postgres in Neon DB) featuring 6-role RBAC, full document lifecycle management, IPFS pinning via Pinata for content-addressed storage, and append-only audit trails.
- Implemented a sliding window rate limiter with per-key tracking, built a comprehensive Vitest suite covering route handlers and governance workflows, and designed a brutalist interface using Tailwind CSS 4.

AGRISSETU — AI Voice-First Agricultural Marketplace 🐙 agrisetu

Feb – Apr 2026

Voice-first marketplace for farmers to procure supplies via collective group ordering.

- Engineered a voice-first agricultural marketplace (Flutter, Next.js, Express, Turborepo) processing PCM audio through AWS Transcribe (11 languages), GLM-4.7 Flash on Bedrock, and Polly TTS, with automated deployments via GitHub Actions.
- Designed and deployed a RAG pipeline utilizing Titan Text Embeddings v2 and Bedrock Knowledge Base to retrieve semantic domain knowledge, eliminating LLM hallucinations on regional dialect queries.

EXTRA-CURRICULARS

- National Service Scheme Volunteer — Awarded Silver Medal for collaborative performance (2019).
- Associate Manager, Entrepreneurship Cell, IIT KGP — Organised the Global Entrepreneurship Summit 2021, LSM 2020, EAD 2020, and Empresario 2020.
- Club Service Director, Rotaract Club of Calcutta North East.
